**THE TOWN OF BURRILLVILLE'S 21st SET OF DATA REQUESTS TO
INVENERGY THERMAL DEVELOPMENT LLC**

- 21-1 Our understanding is that approximately 20,000 gpd of water will be consumed during natural gas usage. Is this both units or per unit? If water is delivered to the site by truck:
- a) How will it be stored on-site?
 - b) How frequently will deliveries be made to the site (i.e., daily, weekly)?
 - c) How many deliveries will be made during a given day?
 - d) When will deliveries be made (morning, night, any time)?
 - e) What traffic route(s) will be used?
 - f) What type/size truck will be used?
- 21-2 What processes will be implemented to reduce water consumption during natural gas usage to 20,000 gpd? Will this be a combination of process cooling changes and wastewater recycling? Please explain in detail.
- 21-3 How much water will be required when oil is used as the fuel for one unit? For both units?
- 21-4 Is the amount of water required for oil, more or less than what is required for natural gas? Please explain in detail.
- 21-5 Do the water saving measures that apply for natural gas, also apply to oil?
- 21-6 If the 2M gallon water storage tank is used when oil is the fuel:
- a) How much water per day will be consumed?
 - b) How will the tank be refilled?
 - c) In what timeframe will the tank be refilled?
 - d) How many water deliveries per day will be needed?
- 21-7 Please explain in detail how the deionization ion system would work. Please specify what chemicals are involved, and in what amounts, how they will be delivered/stored/used at the site, and what steps you propose to take to protect workers, residents, and the environment from these chemicals.
