

Ladies and Gentle man of
The Board:

(1)

I am here to tell you that I am very proud
of Rhode Island, because
we just made History!

Rhode Island now has the first in the
country, Deep Water Wind Farm!
Off the Coast of Block Island

Lets Give a hand For Wind!

Now, unfortunately, we must Diverge from
that, and think about this.

How could Rhode Island be entertaining the
possibility of a New Power Plant.

~~The~~ A power plant that will set us back 40 years.
~~The~~ 40 more years committed to fossil fuel!

We must be the laughing stock around the
country!

How could Rhode Island be so foolish?

②

IF the Power Plant Comes to Fruition,
it will spew toxic matter, over a 100 mile
radius, into the Atmosphere.

It will invade every body of water,
The soil of our gardens and the air
that we breath.

We will absorb it through our skin,
we will ingest it, and we will be breathing it.

More asthma, bronchitis, pneumonia
and Lung cancer.

Has anyone thought about a Toxic spill or an
explosion? Bottillville does not have a Fire Department.

It will take 45 min. for an emergency response
Team to come in from Providence!

Death and Destruction will happen before
they get to Bottillville

3

How about all of the water that the power plant will consume?

With 2 power plants, the water adds up to millions of gallons of water per day, even during a drought.

The Governor has requested us to reduce our consumption! we go thirsty, while the Power Plant gets the water?

And another thing, How about the destruction to our contiguous forest?

Does anyone care about that?

A Power Plant Twice the size of Providence Place Mall?

In the middle of the forest?

Rhode Island does not need ~~the~~ ^{more} megawatts, the electricity will be sold to other states.

IN-nergy is using and abusing Rhode Island
