Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clean River Energy Center, a massive new \$700 million fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Kaaren Frenette

Dear Bianco,

How can the EFSB even fathom sending maybe hundreds of health risk diesel trucks per month through narrow residential streets with many houses a scant 20 feet from the curbs. There are several schools and churches to pass by also. Do you really think the risks to these residents over a 40 year period are worth the few temporary construction jobs.

Do you really want to sell precious drinking water to a power plant.

All RI has rights to that water which serves over 60% of RI at this time. Suppose there is a statewide water emergency someday?

The myriad environmental/conservation concerns are exhaustively and well documented, at least outside of the phoney State Planning advisory.

And how is this plant to save us on electricity costs when they can't sell their energy on the futures market because every other electrical producer is already selling cheaper.

And what about the decommissioning of Brayton Point Power Plant (1500 MW) this spring? Somerset officials are lamenting its tax loss and are asking for perhaps a new plant. The infrastructure is already in place.

A dedicated road right from I195, railroad for safe movement of hazardous materials, oil pipelines already in place. And prevailing winds blow most smokestack emissions out to sea. Also sea water cooling is a mature technology.

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clear River Energy Center, a massive new fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clear River Energy Center, a massive new fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

Truck traffic alone is justification to deny permit license for this facility. Currently almost no tractor trailer trucks traverse this route today. The EFSB is considering upwards of over 40 tractor trailer trucks per day along this route to deliver the consumables this plant needs to sustain its operation. The notion of even considering this much truck traffic volume along this route is inconceivable.

Quite simply this is the wrong location for a project of this scale & size. Allowing this facility license to operate will detrimentally change this community for perpetuity.

Please deny this permit.

Respectfully,
Kevin Cleary, PE, Chairman
Town of Burrillville
Conservation Commission

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Kevin Cleary

Todd Bianco
RI

Dear Bianco,

I am writing to express my strong opposition to the Invenenergy power plant project in Burrillville, RI. I believe that this project represents an existential threat to human life. Not only will it pollute the air and water, it will also foster dependence on obsolete and limited energy resources. Furthermore, the wasting of vast amounts of drinking water is both reckless and ill conceived. Water is a precious resource which is dependent on unpredictable rain/snowfall to replenish. What will happen when the next drought occurs? Who will be able to utilize this very limited and needed resource? Why should a company waste our drinking water when regular people conserve water. If it's yellow, let it mellow seems kind of pointless when the water is really owned by corporate pirates. Will they sue the state or water supply board to get at the expense of the citizens during the next drought when, not if the next drought occurs. Humans need water to live. It is an irrefutable fact. Humans need clean air to live. Humans need food that is free from poison to live. As Burrillville has previously seen, once an area is polluted, the water, air and soil become toxic to life. As Burrillville also has seen, once your your area is polluted, it is no simple matter to fix if it can be fixed at all. We need to invest in the technology of the future, not the past. You may as well build a Conestoga wheel factory, it would do less harm.

I request that the Energy Facility Siting Board dismisses Invenenergy's application for the Clean River Energy Center, a massive new \$700 million fracked-gas power plant in Burrillville, RI.

Invenenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

Thank you,
Kevin Descoteaux

Please issue an order to dismiss Invenenergy's application and close the docket for this project.

Sincerely,

Kevin Descoteaux

Dear Bianco,

I am writing to strongly urge the Energy Facility Siting Board to dismiss Invenergy's application for the Clean River Energy Center.

My understanding is that Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. Without the missing information, the Board does not have enough information to do it's job properly.

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Kevin Lary

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clean River Energy Center, a massive new \$700 million fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

Furthermore, the fossil fuel energy industry has a very long record of putting profit before safety and for doing the bare minimum to clean up after spills or leaks. We all know that fossil fuels are a finite source of energy. We know that extracting the remaining deposits causes tremendous damage and pollution (spills, earthquakes, contaminated drinking water, etc.). We have to be grown-ups and invest full-bore into developing renewable energy resources because they are the only ones that will still be here far into the future for our descendants.

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Kristin Clark

Dear Bianco,

To: the Energy Facility Siting Board

I urge you to deny the Invenergy application for a fracked-gas power plant in Burrillville, RI. Fracking has become a national danger; water pollution, escaped methane gas, increased likelihood of earthquakes, etc., and in this administration is becoming unregulated. Furthermore, it needs lots of water, which creates more problems. The future is in renewable energy, and all resources should be in that direction.

Invenergy has not provided all the needed information to make a truly informed decision, and that violates the Energy Facility Siting Act.

Harold Kushner
Providence [REDACTED]

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clear River Energy Center, a massive new fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Laura Borth

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clear River Energy Center, a massive new \$700 million fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

It is your duty to uphold the process. After reading the source material it is clear that the only decision you can make is to dismiss the application with or without prejudice.

Please listen to the constituents. Listen to the 31+ communities who are against this project. Protect Rhode Island and the surrounding States (to include my home) from harmful pollution.

I live 6 miles from this proposed plant. My parents are a mile from its doorstep. My friends live across the street. Please. Do the right thing.

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Laura Young

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clean River Energy Center, a massive new \$700 million fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

With an ever changing plant in regards to water usage, noise pollution, chemicals released in the air it is obvious that Invenergy is making things up as it sees fit.

The recent data releases do nothing to diminish the concerns I have.
In both 2016, and 2017 it showed that the grid did not even need the energy from the plant.

WE DON'T WANT IT, WE DON'T NEED IT , JUST KILL IT!

Lauren Nidel
United Against Invenergy
RI Progressive Democrats

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clean River Energy Center, a massive new \$700 million fracked-gas power plant in Burrillville, RI.

Rhode Island should be supporting green sources of energy and moving away from fossil fuel energy sources. Climate change is the result of fossil fuels and Rhode Island is already being negatively affected by sea level rise, coastal erosion and severe weather. Bringing Invenergy's power plant to our state is a huge mistake.

Thank you!

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clear River Energy Center, a massive new fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

I moved to Burrillville for the beauty and the serenity that this beautiful area offers. I don't want to hear or see convoys of tractor trailer trucks going by carrying water & fuel. Not to mention we all have well water, how long will it take for this fracked-gas power plant to contaminate all our wells. Please take our concerns not only for the beauty of this area but also concerns for our health and well being into consideration and dismiss Invenergy's application and close the docket for this project.

Sincerely,
Lisa Bacchiocchi
844 Jackson Schoolhouse Rd
Pascoag,, RI 02859
lmbacchi30@cox.net

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Lisa Bacchiocchi

Dear Bianco,

I truly hope that the Energy Facility Siting Board dismisses Invenergy's application for the Clear River Energy Center.

We do not feel Invenergy has given us enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. Therefore there doesn't seem to be enough information for the Board to do its job.

Sincerely,
lisa ballou

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clear River Energy Center, a massive new fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job. Now they will be using a new system of cooling their turbines which involves less water and a great deal more ammonia. I am less than a mile from the power plant and feel that the application should be dismissed. This area is not located next to a highway and an emergency route to exit would be through country roads, it takes about half an hour to get to any highway. We do not have a large fire department to take care of any toxic leaks, spills or evacuations. I owned a freight brokerage company for 12 years and under the best of circumstances there were many tractor trailer accidents. Our area is full of narrow, winding country roads.

The ISO stated that the power generated from this up and coming power plant would not be needed so why are we even entertaining the idea of building this killer polluting plant.

Lastly my son lives at 89 Manly Drive about 1/2 mile from the proposed power plant he just turned 30. I worry that when he has children they will be born with birth defects and will have medical issues from the contaminants spewed from this power plant. I ask the three people that sit on the EFSB Citing Board would you want your children, grandchildren living 1/2 mile from a fracked gas power plant? Would you want to take that chance with their life? We have sunken our life saving into my son's house and I never thought his life house would take his life, I beg of you say NO to the power plant, they have not played above board, they were given two extensions and we were given none. They also have not found a backup water source. I say Gina Rimando saying that Rhode Island was in the forefront of green energy so why arent we building wind turbines, or solar panels? If you approve this I am asking all three of you to move in this area with your families and live with the decision you bestowed upon us. Breathe the air you will be making up breathe, eat from our gardens, drink from our wells, listen to the continuous sounds coming from the power plant and the compression station, be on the icy country roads with the ammonia filled tractor trailers subject yourselves to the same that you want to subject us to.

Respectfully,
Lisa M. Fabianski

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Sincerely,

Lisa Fabianski

Todd Bianco
RI

Dear Bianco,

I am a Providence, RI constituent and I oppose the Invenergy Power Plant, and I oppose the sale of Providence Water to Invenergy through Johnston's wholesale contract with the Providence Water Supply Board.

I have been following this situation for months and the details are quite disturbing when brought to light. To date, 24 out of 39 municipality councils in RI have opposed the construction of this power plant through similar resolutions and these municipalities are not even facing threat of a massive potable water hijack. The city of Pawtucket, who a few weeks ago sought to become a backup water provider to Invenergy, is no opposed to the construction of this plant based on the deceitful nature of Invenergy's tactics in securing water and approval for its power plant.

During the Woonsocket Town Council meeting to decide whether or not to sell water to Invenergy, there were very few Woonsocket residents who spoke in support of the sale of water. Most who supported the sale were union workers looking forward to the 225 temporary union jobs that would construct the facility. Once construction of the facility is complete, only 25 nonunion jobs would be available. A paltry three nonunion jobs would emerge from the transit of water from Johnston to Burrillville. Surprisingly, a few people who opposed the sale of water actually supported the construction of the power plant in theory but after witnessing the constantly changing presentation of Invenergy plans, had a deep distrust for this company and the potentially catastrophic deal that Woonsocket would be entering into with the sale of water to the power plant and so they opposed the sale of water in this case. When asked why the Woonsocket Town Council members rejected the sale of water to Invenergy, nearly all cited distrust for Invenergy, and the manipulative manner in which they approached the city of Woonsocket, pitting Mayor against Councilmembers. In addition, Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job. It is clear that this deal is rushed, that there has not been time allowed to review the details of impact, even financial impacts, of the deal. As evidenced by the recent ISO NE energy auction in which Invenergy was not able to sell its second half of power to the regional grid, we are not in an energy deficit. We are, in fact, in a surplus of produced energy. So, if we are in a position here in RI to shop around for energy, who stands to benefit from this rushed deal with Invenergy? If the majority of the RI citizen supporters of the power plant are union workers who would like a construction opportunity here in the state, this only tells us that we need more construction jobs, not necessarily more energy.

In addition to fossil fuel power plants, Invenergy also has expertise in solar and wind energy facilities. When asked why they are not building these clean energy facilities here in RI, their reply was that sometimes the wind does not blow and the sky gets cloudy. Even if we stopped using fossil fuels today, we are on track to endure the hottest and driest weather in history with each passing year. This sets the stage for massive droughts, even worse than what we experienced this year. We simply cannot afford to "see what happens" when Johnston sells potentially hundreds of thousands of water per day to Invenergy, never mind the impacts of particulate matter polluting a 30 mile radius around this plant. We have no precedent for this kind of water usage in the Scituate Reservoir. Clearly, the effects could be catastrophic on many levels with no recourse once the deal is made. We unfortunately do have a precedent for air

pollution in RI, one that makes our citizens victims of asthma and other respiratory diseases and diminishes the small areas of intact ecosystems that act as carbon sinks and help the our climate regulate the disturbance of atmospheric degradation and global warming caused by this exact action of humanity- burning fossil fuels for energy. Let's work together to build clean energy power plants. Solar and wind energy are the future. Give our unions something worth building, not something that will reduce our quality and longevity of life.
Please oppose the Invenergy Power Plant.

Sincerely,

Liz Downing

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

This company has done nothing but lie, back room deals, and Burrillville's town solicitor had his license suspended anything he was involved in sure be null and void. If you site this you will be putting Wallum Lake in danger of being polluted, and Wallum Lake is a drinking water source for a Satae hospital. Would you put a power plant next to the Scituite reservoir ? The department of health monitors that body of water. If polluted, it would shut down Zamborano. Half of our town works there. So are you willing to give up over 500 union jobs for 25 permanent jobs, that won't even be from our town. You would be killing us in more ways than one.

Please help us live
Lynn Gomyea

Please issue an order to dismiss Invenergy's application and close the docket for this project.

Feb 15, 2017

Todd Bianco
RI

Dear Bianco,

I request that the Energy Facility Siting Board dismisses Invenergy's application for the Clear River Energy Center, a massive new fracked-gas power plant in Burrillville, RI.

Invenergy has failed to provide enough information for the agencies and subdivisions to issue a fully informed opinion, which violates the Energy Facility Siting Act. There is still not enough information for the Board to do its job.

I oppose the sale of Providence Water to Invenergy through Johnston's wholesale contract with the Providence Water Supply Board and support using whatever means necessary, including amending state legislation, to avoid the allowance by the town of Johnston to sell Providence Water Supply Board water at a profit to Invenergy. I have been following this situation for many weeks and the details are quite disturbing when brought to light. There are volumes of letters in opposition to the plant as well as troubling information from our planning, environmental and health experts from all over the state available at this website: http://www.ripuc.ri.gov/efsb/2015_SB_6.html. To date, 24 out of 39 municipality councils in RI have opposed the construction of this power plant through similar resolutions and these municipalities are not even facing threat of a massive potable water hijack. The city of Pawtucket, who a few weeks ago sought to become a backup water provider to Invenergy, is now opposed to the construction of this plant based on the deceitful nature of Invenergy's tactics in securing water and approval for its power plant.

It is clear that this deal is rushed and that there has not been time allowed to review details of the impact, even financial impacts, of the deal. As evidenced by the recent ISO NE energy auction, in which Invenergy was not able to sell its second half of power output to the energy grid, RI is in an energy surplus. So, if we are in a position here in RI to shop around for energy, who stands to benefit from this rushed deal with Invenergy? If the majority of the RI citizen supporters of the power plant are union workers who would like a construction opportunity here in the state, this only tells us that we need more construction jobs, not necessarily more energy. Invenergy clearly is using the leverage of union workers to push its agenda on RI, as seen in the tragic and ugly way that Johnston "leaders" cleared a path to not only use this situation for its own economic benefit but also to disenfranchise legitimate residents of Johnston who wished to voice a dissenting opinion.

We simply cannot afford to "see what happens" when Johnston sells potentially hundreds of thousands of water per day to Invenergy, never mind the impacts of particulate matter polluting a 30 mile radius around this plant. We have no precedent for this kind of water usage from the Scituate Reservoir, but this agreement sets a precedent that other unregulated wholesale and retail customers of Providence Water can sell our water at a profit. Solar and wind energy are the future.

Give our noble unions something worth building, not something that will reduce our quality and longevity of life!

Please issue an order to dismiss Invenenergy's application and close the docket for this project.

Sincerely,

Lynne Tucker
