In re: The Narragansett Electric Company d/b/a National Grid Interstate Reliability Project : **Docket No. SB-2012-01**

National Grid's Responses to the EFSB's 1st Set of Data Requests

REQUEST EFSB 1-4:

Please detail any documented concerns received from individual landowners related to this project. Please include a copy of any related communication received by the Company, a description of any actions taken and/or copies of communications made to those individuals to address those concerns and/or the anticipated resolution by National Grid.

RESPONSE:

The most common landowner concerns expressed to date include those relating to the loss of vegetative buffer, access for construction vehicles, increased all-terrain vehicle activity, ownership of the felled trees, proximity of proposed structures to homes and electro-magnetic fields (“EMF”). In response to these concerns, representatives from Stakeholder Relations met with customers to discuss the Landscape Restoration Plan, post-construction restoration commitments and the Project’s wood program. In some cases, engineering took a second look at the location of the proposed structures to determine if relocating the proposed structure was feasible. Several EMF readings were taken and the results were shared with abutters.

More detailed information, including the names and addresses of specific abutters, can be provided to the EFSB under seal if requested.

Response prepared by or under the supervision of
Margaret Neves
