

Dear - EFSB

I am not a very good speaker so I would like to tell you a little bit about my personal story. I was born in Providence R.I. and had many siblings so we didn't have a lot of money we lived in a very bad area. My mom and Dad saved up all they could so we could live in the country and at first we were not happy. We said we didn't want to live with the cows, but we ended up very happy here and I love Burrillville. If this power plant is built here my children said they will move away with my grandchildren I do not blame them one bit. ~~my boyfriend will stay but living next to my~~ grand children has been my biggest blessing. I'm asking that you please not go ahead with this because if you look into this powerplant as I have it is a bad thing all around TOXINS/TRUCKS it will be hell to live here.

Living next to my →

Please reconsider

Thank you

A concerned citizen

I take my grandkids in the woods for ~~open~~ nature walks my little 3 year old granddaughter and she sings "I love the forest".

I take them all the time looking at the animals we go "looking for treasures" I will lose all that

I have known with them. They love swimming and I will not be bringing <sup>them</sup> to these lakes because they are in close proximity to the power plant. They have grown up in Birrillville walking trails visiting every every park in town. This will end for them and my daughters as I said will move away to another state. My life would change drastically forever.
