

Good evening

My name is Linda A Nichols,

I am the Chair of the

Glocester Community

Resource and Waste Water

Advisory Commission In

Glocester R.I.

Let me tell you a little bit of

what we are about...

The Purpose of resource

commission is to utilize many

resources both human and natural , help reduce property taxes by utilizing the power of the sun, wind and water , to generate electricity which is transmitted back to the grid.

The commission is to create a public body whose primary responsibility is to assist the town with implantation and management of green

energy resources and to advise the town council and other town boards and commissions on how the town can better utilize the natural physical and human resources within the town with the purpose of setting the burden of taxation .

I am also a former resident of Burrillville .

I was born and raised in the

town Burrillville .

I oppose this power plant
that you want to build here.

1. It is desaster waiting to
happen. With all the
devastation that has already
been going on ⁱⁿ on our world,
tornadoes , hurricanes, high
sea levels , warm
Temperatures , droughts,
as the Earth warms, it will
lead to an increase in air

pollution and allergens,
which will worsen asthma
and other respiratory
diseases. The climate change
is here and has been here for
yrs,

This is what ^{we} I call man
made climate change. But I
will tell you this , if we keep
allowing people like you
coming into our towns we
wont have a planet left .

I have five grandchildren
and some that live here in the
town of Burrillville , I dont

want to see my grandchildren having to clean up these big corporation messes. It is our job to protect the earth not to destroy it ,,that by teaching our future generations to be self sufficient and less dependent on fossil fuels and teaching them the importance of our environment and natural resources around us and to protect the land and waters that define our communities and enrich our quality of life , We need to

bring the earth back to the natural resources...

Just in the town of glocester we have more than 50 dams and there are more than 670 dams in the State of Rhode Island , these ^{Dams} can be powered by water turpines called hydro power which were once used during the industrial revolution THAT OUR FOUR FATHERS HAVE USED CENTURIES AGO. When mills were operated by water power.

most natural resources. Now we have Solar which has been around for awhile and now is more advanced IN ITS TECHNOLOGIES.

and can be added benefit to reduce property taxes. can be placed on roofs of schools , town facilities We want good clean energy--- not destructive energy . Greed and Corporate power dominate the public good and impose nearsighted focus on short term profits

instead of serving our long -
term needs and the welfare of
future generations.

It seems to me today that
leadership only listens to
leadership instead of the
people whom they serve.

When are elected Officials
turn their backs on the voice
of the people and

give you this sitting board the
power to make the final
decision on these peoples

lives and faith that you want to change .

What right do you have to come here and disrupt there lives .

Now it is my understanding that the governor appointed this board-- so this way they do as she says.

Its also my understanding that she will be appointing more people on this board

am I right???

I would like to be appointed
to this board

you want someone to make
the finale decision I will
make the right one . ~~as all~~
~~theses people as a witness~~ I
want the governor to appoint
me to be on this sitting
board . because it seems to
me that no one else can ...
and are Senator of Rhode
Island who preaches about
climate change can't even
have the guts to be here

fighting for the people,, and
our two ~~State reps Forgarty~~
and ~~Keable who say they do~~
oppose it

~~only because it's election~~
~~time. and they know they~~
~~wont get elected if they dont~~
~~opposse the power plant. We~~
need to think outside the box
be fearless and stand up for
Americans and America

and stop people like you and
this power plant to stay out of
the towns and come up with
better solutions then what

they want to offer this town
of Burrillville .

Remember this old saying get
of Dodge ,, well get out of
Burrillville , we dont want
you here and we didnt ask
you to come here. So go
back were you came from.

*Energy Leadership Day
Senate House*
