

My name is Jack Lamoureux. I am 8 years old and live on Camp Dixie Road not far from where the power plant will be built. I'm up past my bed time to share my concerns with you. I maybe little ; but I hear it all. Like how you think no one cares. Lots of people do care, but they may not be able to come to the meetings. My Dad usually comes and my Mom stays home with me and my brother because the meetings go on very late, past my bedtime and we need our rest for school tomorrow. My Dad represents 4 people. I am scared and don't understand why you are going to build something that will hurt us.

I have learned our governor went to the same elementary school I go to: St. Philips School. At our school we are taught to conserve the environment by recycling, turning off lights when we leave a room, not being wasteful with food or water and loving and caring for all things God made, like trees, clean air, animals and people. Why are you knocking down trees which help clean the air, taking homes away from animals, to build a power plant that will hurt us making the air dirty and our water dirty?

What is going to happen to me? To my family and friends? Nature? And our World? I feel that the people who are for this power plant are bullying the people who are against it! Why do you want to let something that will hurt us come into our town? I'm scared I could die if this power plant is built!
