3/31/2016.

To whom it may concern,

I live on Staghead Drive, it is a very short distance to the proposed power plant site. (Approx .5 mile). We moved here in 1989 from Providence, for a better quality of life. I was not aware of the proximity of the existing compressor station at the time, however, with the exception of some noise from that station and occasionally hearing pressure relief , it has been tolerable. Since the power plant has been brought to our attention, we find many adverse affects to the community as a whole. And particularly to the residents in close proximity. Many of the concerns are obvious, no one wants this in their community, but our concerns are real . We have wells, you are proposing fracking for your water consumption , tell us how this is not going to affect our aquifer in a negative way. Air pollution will affect people for miles around. Noise pollution, no one wants to hear this. The amount of traffic, heavy trucking during and after completion of project. The roads and bridges in this area are already in disrepair, there is no way that they will be able to handle this enormous increase. I plead to everyone involved , you don't have to live a mile away, this is going to adversely effect everyone within many miles and towns around us. Please listen to the people, we do not want it, we do not need it.

What's wrong with wind energy? Solar energy?

Stop the power plant!

Respectfully ,

Joseph Lawton and family
