PUBLIC UTILITIES COMMISSION

Re: Semi-annual Btu Content Factor Update

Dear Luly:

Pursuant to Section 1, Schedule B, Sheet 1 of the Company's currently effective tariff (RIPUC NG No. 101), the Company shall calculate the seasonal btu content at the end of October and April based upon the prior six-month experience. Such btu conversion factors shall be used to convert volumetric meter readings into therms. Based on actual gas send-out data for the six months ended April 2006, the actual weighted average system btu content was 1.024. Thus, for the period November 2006 through April 2007, the Company will convert volumetric meter readings to therms using a btu conversion factor of 1.024. For example, a meter reading of 100 ccf will equate to 102.4 therms (100 x 1.024). The 1.024 btu conversion factor reflects an increase from the 1.023 btu conversion factor currently in effect through the end of October 2006.

Attached please find daily sendout data for the period November 1, 2005 through April 30, 2006, supporting the 1.024 btu conversion calculation. Volumetric and thermal equivalent sendout data is presented for each gate station and production facility on a daily basis for the six months ended April 30, 2006. As shown on page 9, for the six months ended April 30, 2006, the Company sent out 26,697,421 MMBtus and 26,080,701 Mcfs, resulting in the semi-annual weighted average btu conversion factor of 1.024.

Please call me at 574-2309 if you have any questions or would like to discuss the btu conversion calculation further.

Sincerely,

Peter C. Czokanski
Principal Analyst
