3. What would the salary level have to be in 2010 for the employee to pay 10% of the health care premium?

Answer: Using the rate year health insurance premium levels for the calculation the employee would have to be paid the following salaries:

- a) For employees hired after July 1st 2004 and enrolled in Healthmate and employees hired after July 1st currently enrolled in Blue Chip opting for Healthmate the calculation is as follows:

Family Premium (annual) Times	\$13,699 <u>10%</u>	Single Premium	\$5,013 <u>10%</u>
Co-payment	\$1,370		\$501
Divided by rate	<u>.03</u>		<u>.03</u>
Salary Level	\$45,667		\$16,710

- b) For employees hired before July 1st 2004 and employees hired after July 1st currently enrolled in Blue Chip and opting to stay with Blue chip the calculation is as follows:

Family Premium (annual) Times	\$12,072 <u>10%</u>	Single Premium	\$4,420 <u>10%</u>
Co-payment	\$1,207		\$442
Divided by rate	<u>.0275</u>		<u>.0275</u>
Salary Level	\$43,891		\$16,073

Of course the health insurance premium will probably increase over the next three years but the calculation method will be the same.
