Warwick, RI 02888

Re: ADDENDUM I TO RIPUC DOCKET NO. 3888

Dear Ms. Massaro:

On behalf of the Pascoag Utility District (Pascoag or the District), we herewith file an original and nine copies of Addendum I to Pascoag's proposed Demand Side Management Programs for 2008. This submission includes Pascoag's proposed changes, a revision to the Program Details for 2008, and other schedules that support this docket.

If you have any questions, please do not hesitate to contact me.

Very truly yours,

Harle Round
Customer Service Representative

Cc: Mr. William Lueker, Esquire
Cc: Mr. William Bernstein, Esquire

**Addendum I to Pascoag Utility District's Demand Side Management Program-2008
RIPUC Docket No. 3888**

Request to revise the proposed 2008 Budget.

In total, PUD is requesting five changes to the proposed 2008 Demand Side Management Program; these changes will affect the Residential, Commercial/Industrial, and Administrative/Ad/Education programs. The District is submitting various exhibits supporting these changes and this overview will highlight what changes the District is proposing.

The requested changes will impact two line items in the Residential programs, two line items in the Industrial/Commercial programs, and one line items in the Administrative / Ad / Education.

Exhibit I – Shows the proposed 2008 DSM Budget and requested changes to the original proposal listed under Revision I. This Exhibit will also show the change in dollars.

Exhibit II – Shows the details of the proposed budget.

Exhibit III – Supporting documentation.

Now we would like to summarize the proposed changes and the rational behind the changes.

The proposed revision to the 2008 DSM budget will include the estimated carry over of \$6000, increasing the proposed budget from \$110,000 to \$116,000.

Changes to the Residential Programs:

1. As a result of discussions with Division, the District is requesting a decrease to the incentive amounts for appliance. The interest in this program remains very high therefore the District does not feel that the reduction would be a deterrent. Based on the average cost of the following appliances the District is reducing the rebate to around ten percent. Please see Exhibit III-1 for a spreadsheet on the average purchase price for the various appliances.

The budget will remain constant at \$5000 but in order to serve more customers in 2008 the District is proposing the following decreases:

Appliance	Current Incentives	2008 Proposed Incentives
Refrigerator	\$100.00	\$75.00
Clothes Washer	\$100.00	\$75.00
Dishwasher	\$50.00	\$50.00
Air Conditioner	\$50.00	\$25
Dehumidifier	\$50.00	\$20

2. The District is also proposing a change in the Energy Star Windows and Door incentives. In order to serve more customers with a budget of \$5000 the District would like to keep the amount of incentives for windows at \$25 and doors at \$50 each, but reduce the maximum amount per custom from twenty windows to ten windows and reduce the maximum amount for doors from two per customer to one. This change would reduce the maximum incentive per customer from \$600 to \$300 and will allow us to double the number of customers who could take advantage the Energy Star windows and door incentive.

Changes to the Industrial/Commercial line items:

3. When the District proposed the creation of a line item called “Committed funds”, and requested to increase the Burrillville Library incentive with the carry over funds from 2007, the District was unaware of any other prospective customer at that time. During the past week the District has received calls from the following customers listed below. As a result of these new developments the District would like to do away with the “Committed Funds” line item and replace it with “Identified Future Lighting Projects” and fund it with the \$6000 estimated carry over funds from 2007. All of these projects have been identified as possible future rebates and will be subject to funds availability therefore should the carry over be greater than \$6000 the District would like to suggest that any overages be allocated to this line item in 2008.

Identified Future Lighting Project	Project Type
Brigido’s IGA	Retrofit Lighting
Austin T Levy – Gym	Retrofit Lighting
Burrillville High School – Gym	Retrofit Lighting
Bliss Golf Investors	Lighting Controls
Jessie Smith Library	Retrofit lighting

4. The District would like to create a line item called “Community Christmas LED Lighting”. The Harrisville Fire District has approached the District and would like to replace there old incandescent Christmas lights with newer LED Christmas Lights. Each year the District hangs the strings of Christmas lights in the villages of Harrisville and Pascoag.

At the last Energy Advisory meeting at Energy New England the discussion was on LED Holiday lights. I have included cost analysis sheet from the city of Boston in exhibit III-2. Boston did a cost study and as a result, purchased 2100 strings of the C-7 LED lights and realized a savings of \$3.71 per string for a total savings of \$7806.

The electric demand for the old technology is 12.5 watts verses 2.4 watts for the new technology which adds up to a substantial savings in a very short period of time. The costs of the C7 LED, 25 light set is \$18.50, compared to the incandescent C7, 25 light set at \$7.90. The cost for C9 LED, 25 light set is

\$25.50 compared to the C9 incandescent, 25 light set at \$7.90. The LED Lights are two to three times more expensive but savings of up to 98% in electricity quickly adds up. I have also included the pricing on the various lighting mentioned in exhibition III-3.

The District feels very strongly about creating this line item which will help the Fire Districts in our service territory to purchase new energy efficient Christmas lighting. The savings will directly impact all the ratepayers in the District therefore a rebate of 50% of the cost, not to exceed \$500 per Fire District, for the LED lights is proposed. If this line item is approved by Commission and Division, the District will approach Pascoag Fire District and ask them to replace their older incandescent lights with the new LED lights.

Changes to Administrative/Ad/Education:

5. To Fund the "Community Christmas LED Lighting", the District will take the funds from "Funds for Follow-up to Successful Program". This would reduce this line item from \$1510 to \$510.

Monday July 30, 2007
 City of Boston LED Holiday Lighting Meeting

Electrical cost of a light bulb:

- Wattage of the bulb x hours per day x days per year = # of watt-hours.
- # of watt-hours/ 1000 = kWh (kilowatt hour)
- kwh x kwh rate = electrical cost per year.

For this analysis we are using the following information:

- The City of Boston pays .15 per kWh.
- Holiday lights are on 5 hrs per day for 6 weeks. $5 \times 7 \times 6 = 210$ hours.
- There are 70 trees with 750 C-7 incandescent lights each, which translate to 2,100 strings of 25 lights each. $(70 \times 750 = 52,500 / 25 = 2,100)$
- A 25 light string of C-7 incandescent use 120 watts of power.
- A 25 light string of LEDs use less than 2 watts of power.

Therefore:

- 2100 strings of C-7 incandescent x 120 w = 252,000 watts.
- 252,000 x 210 = 52,920,000 watt-hours.
- 52,920,000 / 1000 = 52,920 kWh.
- 52,920 x .15 = **\$7,938.00** electrical cost.

- 2100 strings of LEDs x 2 w = 4,200 watts.
- 4,200 x 210 = 882,000 watt-hours.
- 882,000 / 1000 = 882 kWh.
- 882 x .15 = **\$132.30** electrical cost.

Electrical savings for these 70 trees = \$7805.70.

Electrical cost for each 25 light incandescent string = \$3.78
 Electrical cost for each 25 light LED string = \$.063 or 6.3 cents.

Electrical savings for each 25 light string = \$3.71

Payback for each string of LED Holiday Lights Strings

	Wholesale Price	Seasons for payback
White C-7 LED	\$11.63	3
Red C-7 LED	\$7.65	2-3
Blue C-7 LED	\$9.38	3
Green C-7 LED	\$10.88	3
Multi C-7 LED	\$8.70	3

DI GEN LIGHTING

electricity savings

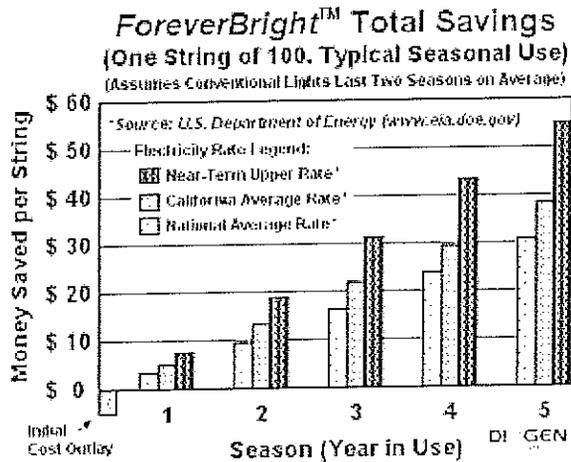

Diogen lights achieve high brightness with only a small fraction of energy. Instead of consuming about 50 Watts per string of 100 (conventional mini-lights), Diogen lights use only a few Watts of power. The savings of up to 98% in electricity quickly adds up. As the following chart shows, each string can save dollars per month:

ENERGY SAVINGS COMPARISON

Overall Savings

Diogen lights may initially cost slightly more than conventional lights; but, they more than pay for themselves within a single season. With typical seasonal usage and assuming that conventional lights are replaced every 2 years, the following dollar savings chart results:

For example: with 5 light strings and the national average rate for electricity set at 8¢, Diogen lights save \$150 in five seasons!

Nothing has greater impact than lighting. Lighting influences the appearance, tone and impression of every object and space. The nature of light shapes our vision. Lighting technology has come a long way since the invention of Edison's light bulb. Diogen Lighting has the honor to present to you the next evolutionary step in L.E.D. technology.

Specializing in Patented L.E.D. technology - Diogen Lighting offers long-lasting, low-maintenance and energy-efficient solutions. Through direct partnership with factory facilities and state of the art product development, Diogen Lighting is the perfect partner for your lighting needs. L.E.D. technology provides no glass bulbs to break or filaments to burn out and requires less than 10% of the energy needs of the standard fixture equivalent. We provide a patented plug-in technology on our light strings... direct AC plug-in eliminating the need for DC conversion. This allows installers the ability to connect more than a half-mile of light, end to end, into one electrical outlet without the use of messy extension cords or expensive generators.

Our innovative retrofit products replace traditional incandescent light bulbs with L.E.D. technology without any modification to the light fixture. All our products are available in a variety of lens styles and an array of colors including: pure white, warm white, purple, pink, red, green, orange, yellow, blue and several patented color changing selections.

The "Light of the Future," the Light Emitting Diode, is rapidly replacing incandescent lighting in both decorative and commercial applications. As L.E.D. technology continues to go through revolutionary advances, Diogen Lighting is dedicated to cutting-edge technology. Diogen Lighting is proud to present to the professional electrician and contract installer the technology of L.E.D. lighting with energy savings and code-conforming commercial grade products.

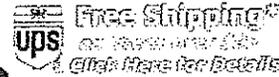

All of our products are available through factory direct in container quantities or domestically through our fast growing distributor base. Please contact us today to find a distributor near you or become a distributor and to begin experiencing the Diogen L.E.D. difference.

C9 Premium Light Sets - Prelamped

Our C9 Premium Light Sets remain the traditional outdoor favorite. We make our C9 lamps with weatherproof bases and fade- and peel-resistant coatings to withstand the toughest rain, sleet, snow and corrosive ocean air. These C9 Holiday Standards are as beautiful as they are durable. Triple-coated with pigment, they shine with rich, vivid color. C9 Light sets feature safety plugs with replaceable 5-amp fuses. They're UL listed for outdoor use.

Diogen™ Multi C7 LED String

This commercial grade light string with large C7 bulbs intended for outdoor use is safer and significantly more energy efficient than incandescent light strings. This string consists of multicolored LED bulbs (Red, Green, Blue, Orange, Yellow). The bulbs on this light string will remain cool to the touch, with lenses made of nearly indestructible solid epoxy. They are constructed with a coaxial connection and a threaded coupling cap that reinforces the end-to-end bond, and rust proof zinc-coated lamp contacts. The strings are dark green. The primary string set comes with a plug for a standard wall socket and 25 foot LED string. Up to 124 extra string extensions may be ordered to create a longer length string (chained together to the primary string). Note that because extra strings do not include a plug, they will not work independently.

- **Electrical Specification:** 120 volts AC, 2.4 watts
- **Bulbs per String:** 25 C7 bulbs
- **Length:** 25 feet
- **Bulb Spacing:** 12 inches
- **Bulb Size:** 7/8 inch diameter
- **Manufacturer Warranty:** 3 Years
- **Origin:** China

Make the Switch...--Old Technology	New Technology
Electric Demand:-12.5 watts	2.4 watts
Utilization (hours) :-5 hours per day	5 hours per day
Utilization (days):-45 days	45 days
Annual Use:-2.8 kilowatt hours	0.5 kilowatt hours

ANNUAL SAVINGS* Electricity:- **2.3 kilowatt hours**
 (savings will vary based upon actual use and source of electricity)
Carbon Dioxide:- 3.1 pounds
Dollars:- \$0.24
 *based on CO2 emissions estimate of 1.34 pounds per kWh and electric rate of 10.4 cents per kWh (more info)

Customer Feedback

I ordered the 8.5' full prelit Brighton Fir tree. The tree is absolutely gorgeous! It is perfectly full, with room and spacing for all our ornaments! It is very real looking, not plastic looking. We love it!
Jane S.
Chesapeake, VA

I was very pleased with everything about this order. Thanks for doing such a great job.
Ed F.
Hamilton, NJ

Thank you Christmas Light Etc and staff for another year of great service and products. I been a customer for the 2nd year and many more to come. Great customer service and great staff that whats its all about, because that what keeps me and people coming back more. Your the best and thank you very much again. Happy Holidays!
