RE: Docket 4323 - Application for Approval of a Change in Electric and Gas Base Distribution Rates Pursuant to R.I.G.L. Sections 39-3-10 and 39-3-11 <u>Responses to Division Data Requests - Set 9 - GAS</u>

Dear Ms. Massaro:

Enclosed is an original and ten (10) copies of National Grid's¹ responses to the Division's Ninth Set of Data Requests in the above-captioned proceeding.

The responses to the Ninth Set included with this filing are listed in the enclosed discovery log.

Thank you for your attention to this transmittal. If you have any questions, please feel free to contact me at (781) 907-2153.

Very truly yours,

Celia B. OBrien

Celia B. O'Brien

Enclosures

cc: Docket 4323 Service List Leo Wold, Esq. Steve Scialabba, Division

¹ The Narragansett Electric Company d/b/a National Grid (herein referred to as "National Grid" or the "Company").

Certificate of Service

I hereby certify that a copy of the cover letter and/or any materials accompanying this certificate were electronically submitted, hand delivered and mailed to the individuals listed below.

/S/ Janea Dunne

Division 9-3-GAS

Request:

Referring to the response to DIV-2-1-GAS, Page 2, please explain the increase in expenses charged to 923 from the expense charged to that account for the twelve months ended June 30, 2011 in the Annual Report to the RIPUC.

Response:

Account 923 expense on the Annual Report to the Commission, shown on page 325, is \$2,298,631 for the 12-month period ended June 30, 2011. On Attachment DIV 2-1-GAS, Page 2, Line 116, the Account 923 expense is \$3,404,469.94 for the 12-month period ended December 31, 2011, which represents an increase of \$1,105,838.94. The primary driver of this increase is increased use of outside services as a result of the IS Transformation initiatives. Please refer to the Company's response to Division 2-10-GAS for a complete description of the costs and savings associated with these initiatives.

Division 9-4-GAS

Request:

Referring to the response to DIV-2-2-GAS, please provide a complete description of the "Westerly Event" and an explanation of how the expenses attributable to that event were identified.

Response:

The "Westerly Event" referenced in the Company's response to Division 2-2-GAS refers to an outage event that occurred in Westerly, Rhode Island on December 21, 2011 where air was introduced into the low pressure ("LP") gas system. On that date, a gas construction contractor working for the Company was performing a routine main replacement project on Cross Street, between Elm Street and Granite Street. As a routine part of the main replacement work, the contractor crew, while purging the residual gas from a section of the gas main, inadvertently introduced air into the LP gas system. The air entered the LP gas system through an LP cut off on Spring Street, to the north of the Cross Street replacement work order for this location. As a result of this oversight, air flowed into the active LP gas system causing interruption of gas service and calls to the Company from approximately 60 customers. The Company took immediate action to correct this situation by implementing a system isolation plan that necessitated interrupting gas service to approximately 1,600 additional customers, resulting in a total of 1,660 customer interruptions. Service to these customers was completely restored on December 24, 2011.

All incremental costs associated with the Westerly Event were deemed to be costs that should not be charged to the Company's customers and were therefore removed from test year costs as a normalizing adjustment in the cost of service on Schedule MDL-3-GAS, Page 8, Column (d). All charges for the Westerly Event were coded to a unique work order. All charges to this work order were considered to be incremental, with the exception of base labor charges, employee expenses and transportation charges of Narragansett Gas employees, and were removed from the cost of service as described above. Please refer to Workpaper MDL-2 for the detail of incremental costs for the Westerly Event.

Division 9-5-GAS

Request:

Referring to the response to DIV-2-20-GAS, please quantify the increase in customer demand for gas conversions. The response should show the expected increase in Gas FY 2013 over the prior year and should explain how that increase is reflected in the forecast of rate year revenues.

Response:

The expected annual increase in customer demand for gas conversions for Narragansett Gas Fiscal Year ("FY") 2013 over FY 2012 is 324 conversions. The Company is projecting 1,760 gas conversions for FY 2013, which represents an increase over the FY 2012 actual gas conversions of 1,436. The forecast of rate year revenues reflects the Company's forecast of net load growth that includes gas conversions. As indicated in the Company's response to Division 2-19-GAS, net load growth includes load losses, attrition and energy efficiency savings that offset gross load additions, which include gas conversions. While the Company's forecast models do not explicitly model gas conversions, they are included in the overall net change in load that the Company is forecasting for the rate year.

Division 9-6-GAS

Request:

Please provide the number of gas customers by rate class for each month from January 2011 to the most recent month available.

Response:

Please see Attachment DIV 9-6-GAS.

Division 9-7-GAS

Request:

Referring to Schedule ALS-4, please explain the forecasted decreases in deliveries from Fiscal Year 2012 to Fiscal Year 2014 for the following rate classes: LLF large FT-1, LLF XL FT-1, and HLF XL FT-1.

Response:

The forecasted decreases in deliveries from Fiscal Year 2012 to Fiscal Year 2014 for the LLF Large FT-1 rate class are caused by the economic and demographic drivers in the use-percustomer model for that class. For this class, use-per-customer is a function of the historical positive relationship with heating degree days, and the historical negative relationships with the ratio of natural gas prices to oil prices and employment. Because the forecasts of both the ratio of gas to oil prices and employment are increasing over this period, the forecast of use-per-customer for this class is decreasing. This causes a decrease in the forecasted deliveries.

The forecasted decreases in deliveries from Fiscal Year 2012 to Fiscal Year 2014 for the LLF XL FT-1 rate class are caused by the economic and demographic drivers in the use-per-customer model for that class. For this class, use-per-customer is a function of the historical positive relationship with heating degree days, and the historical negative relationships with multifamily housing starts and employment. Because the forecasts of both multifamily housing starts and employment are increasing over this period, the forecast of use-per-customer for this class is decrease in the forecasted deliveries.

The forecasted decreases in deliveries from Fiscal Year 2012 to Fiscal Year 2014 for the HLF XL FT-1 rate class are caused by the decrease in customer counts for this class, which are projected to decline from an average of 61 in Fiscal Year 2012 to an average of 50 in Fiscal Years 2013 and 2014.

Division 9-8-GAS

Request:

Referring to Schedule ALS-4, please provide the actual monthly deliveries in 2012 to date and in the corresponding months in 2011 for the following rate classes: LLF large FT-1, LLF XL FT-1, and HLF XL FT-1.

Response:

Please see Attachment DIV 9-8-GAS.

Division 9-9-GAS

Request:

Referring to Schedule ALS-4, please explain why the residential heating sales increase from Fiscal Year 2012 to Fiscal Year 2013 and then decrease from Fiscal Year 2013 to Fiscal Year 2014.

Response:

The residential heating sales forecast increases from Fiscal Year 2012 to Fiscal Year 2013 and then decreases from Fiscal Year 2013 to Fiscal Year 2014 because of the drivers in the use-percustomer models for that class. The forecast of residential heating sales is the product of the forecasted customer counts times the forecasted use-per-customer. While the customer counts are projected to increase continuously over that period, the use-per-customer forecast varies from year to year. Use-per-customer is a function of the historical positive relationship with natural gas prices and the negative historical relationship with fuel oil prices. In Fiscal Year 2013, natural gas prices are projected to increase and fuel oil prices are projected to increase to increase, the combination of which is causing use-per-customer to decrease because fuel oil prices have a stronger impact.
