Luly E. Massaro, Commission Clerk
Rhode Island Public Utilities Commission
89 Jefferson Boulevard
Warwick, RI 02888

**RE: Docket 5234 – 2022 Annual Retail Rate Filing
Responses to PUC Data Requests – Set 2**

Dear Ms. Massaro:

On behalf of The Narragansett Electric Company d/b/a National Grid (“National Grid” or the “Company”), enclosed, please find the Company’s responses to the Second Set Data Requests issued by the Public Utilities Commission (“PUC”) in the above-referenced docket.¹

Thank you for your attention to this filing. If you have any questions, please contact me at 401-784-4263.

Sincerely,

Andrew S. Marcaccio

Enclosures

cc: Docket 5234 Service List
John Bell, Division
Al Mancini, Division
Tiffany Parenteau, Esq.
Greg Schultz, Esq.

¹ Per a communication from Commission counsel on October 4, 2021, the Company is submitting an electronic version of this filing followed by six (6) hard copies filed with the Clerk within 24 hours of the electronic filing.

Certificate of Service

I hereby certify that a copy of the cover letter and any materials accompanying this certificate was electronically transmitted to the individuals listed below.

The paper copies of this filing are being hand delivered to the Rhode Island Public Utilities Commission and to the Rhode Island Division of Public Utilities and Carriers.

Joanne M. Scanlon

PUC 2-1

Request:

Referencing the table included in the Company's response to PUC 1-2, please explain why commercial capacity settlements were significantly higher than forecast in the summer months of 2021?

Response:

The Company estimates the capacity settlement for each Last Resort Service ("LRS") customer group (Residential, Commercial, and Industrial) for each month by estimating the various inputs in the ISO-NE capacity settlement calculation. One of the inputs in the calculation is the Customer Average Peak Contributions (also known as Installed Capacity, or ICAP, tags), which is determined by the load coincident with the ISO-NE system peak in the prior calendar year. While the Customer Average Peak Contribution for all National Grid distribution load is the same throughout a given Capacity Commitment Period¹, the Customer Peak Contribution fluctuates daily for each LRS customer group as customers migrate to and from LRS.

The Company estimates the capacity settlement at the time of each LRS rate filing. The June through September 2021 period was part of the summer LRS rate period which was filed on January 20, 2021. These months are also part of the June 2021 through May 2022 Capacity Commitment Period, and the applicable Customer Average Peak Contributions (ICAP tags) are determined by the load coincident with the ISO-NE system peak in 2020.

ICAP tags for the period beginning June 2021 were not available when the LRS rates were filed in January 2021 and had to be estimated. By January 2021 the ISO-NE had released the preliminary annual system peak day, hour, and load for calendar year 2020. The peak hour for 2020 was estimated to be July 27, 2020 hour ending 18, or 6:00 p.m. The Company estimated the ICAP tags for each customer group for the period beginning June 2021 by using the MW from the resettled hourly load reported to ISO-NE for July 27, 2020 hour ending 18. For the Commercial Group, the MW in this peak hour was 179.175 which was used as an estimate of the ICAP tags in the ISO-NE capacity settlement calculation.

The actual Customer Average Peak Contributions for the Commercial Group for the June through September periods were over 20% higher than the estimated values which resulted in the large difference between forecasted and actual capacity settlements.

¹ A Capacity Commitment Period is from June through the following May.

PUC 2-1, page 2

	Customer Average Peak Contributions		
	<u>Estimated MW</u>	<u>Actual MW</u>	<u>Difference</u>
Jun-21	179.175	215.986	21%
Jul-21	179.175	216.782	21%
Aug-21	179.175	217.711	22%
Sep-21	179.175	219.058	22%

The winter rate period beginning October 2021 included new estimated ICAP tags in the capacity settlement calculation. The Capacity Commitment Period began June 1st, and the Company used each customer groups' initial settlement ICAP tags as of June 30th as an estimate for the winter rate period. The actual ICAP tags for the Commercial Group for the winter rate period were closer to the estimated ICAP tags resulting in smaller deviations between estimated and actual capacity settlement.

PUC 2-2

Request:

Referencing the Company's response to PUC 1-11, please explain the following:

- a. Steps two and three of the class average load shape methodology for rate classes without interval meters are described as: "annual kWh is the basis for stratification" and "hourly loads are computed using Ratio Estimation." Please explain how the Company computes hourly loads for a sample customer based on their annual kWh usage.
- b. The Company writes "specific customer premises were selected as sample sites for each rate class based on random sampling, according to stratum, using customer-specific annual kWh." When selecting customer premises as sample sites, is selection based solely on annual kWh usage, or other customer characteristics as well? If the latter is true, please describe the other customer characteristics on which selection is based.
- c. Step one of the class average load shape methodology for rate classes with demand or interval meters is listed as "for rates B-32, G-32, and X01, the Company uses census load shapes." What are census load shapes?

Response:

- a. The Company's load shape methodology is based on measured hourly loads at the sample customer level. Annual kWh is not used to compute hourly loads for sample customers. Rather, the reference to annual kWh usage refers to how sample customers are assigned to stratum within a sample.
- b. The Company's load shape methodology bases sample site selection solely on annual kWh usage.
- c. For the B-32, G-32, and X01 rate classes, the Company's load shape methodology uses interval meter data from the entire customer population, rather than from a sample. "Census load shapes", by definition, are based on interval data from the population rather than from a sample.

PUC 2-3

Request:

Please re-file Schedule NECO-17 (the Net Metering Report) to reflect the corrections listed in response to PUC 1-24.

Response:

Please see Attachment PUC 2-3 for the updated Schedule NECO-17 Net Metering Report. This reflects the corrections that were made in response to PUC 1-24.

PUC 2-4

Request:

Referencing the Company's response to PUC 1-25, please explain why the Company had originally estimated zero remuneration costs associated with Long Term Contracts in 2021 but incurred \$2.19 million in actual costs.

Response:

Pursuant to the Company's Long-Term Contracting for Renewable Energy Recovery ("LTCRER") Provision, R.I.P.U.C. No. 2174, the LTCRER Factor calculation does not include an estimate of remuneration. Therefore, the Company did not include an estimate of remuneration in its two LTCRER filings for 2021 in R.I.P.U.C Docket No. 5085.

Pursuant to the Company's LTCRER Reconciliation Provision, R.I.P.U.C. No. 2175, contract remuneration during the reconciliation period is included with the Past Period Reconciliation Amount as actual costs to be recovered through the LTCRER reconciliation factor.

PUC 2-5

Request:

In response to the PUC 1-27, the Company explained a recent change in its load forecasting methodology that differentiates energy savings between persistent vs. non-persistent energy efficiency programs. The Company explained that the result of this methodological change is a decrease in energy efficiency savings. Please describe the new methodology in greater detail and explain specifically how it differs from the prior methodology. In your response, provide the underlying calculations/data that support the 240 GWh reduction in cumulative energy efficiency savings.

Response:

In its Fall 2021 forecasting cycle (i.e., when the forecast used in this rate filing was developed), the Company re-analyzed the impacts of its energy efficiency (“EE”) programs for its Electric Load Forecast (“ELF”). Persistent and non-persistent savings were differentiated to accurately account for the accumulation of claimable savings over time. Non-persistent savings from behavioral programs like the home energy report do not accumulate over time and are only considered as savings / reducing-energy for the year in which they occur. Savings from persistent programs do accumulate over time (i.e., lighting programs).

In Attachment PUC 2-5, Table 1 shows the residential and low-income EE savings assumptions for the Company's 2021 ELF (i.e., the current methodology) and Table 2 shows the residential and low-income EE savings assumptions for the Company's 2020 ELF (i.e., the prior methodology).

In Table 1:

- Column D shows the historic and forecasted annual savings from Home Energy Reports, which are non-persistent savings that started in 2013.
- Column E shows the historic and forecasted persistent savings.
- Column F shows the accumulation of persistent savings over time.
- Column G shows the total cumulative savings in each year, which includes the accumulated persistent savings and each year's claimable non-persistent savings.

PUC 2-5, page 2

In Table 2:

- Column K shows the historic and forecasted annual EE savings used in the Company's 2020 ELF. For year 2013 to year 2019, the number value is the same to the sum of column D and column E of the corresponding year. For example, in year 2013, the non-persistent saving is 10 GWh and persistent saving is 59 GWh. The sum of them is 69 GWh and equals to the value presented in column K for the year 2013.
- Column L shows the historic and forecasted cumulative savings, which accumulated the non-persistent savings.

The difference in cumulative savings between Column G and L is explained by accurately accounting for non-persistent savings in the Company's 2021 ELF. The difference for calendar year 2023 is 249 GWh (i.e., 1,207 GWh – 959 GWh), which is slightly different from the 240 GWh quoted in the Company's response to PUC 1-27 for fiscal year 2023. The calendar year vs. fiscal year calculation contributed to the small difference.

Table 1: Energy Efficiency Assumptions for the 2021 Electric Load Forecast

Calendar Year	State	Residential & Low Income: Non-Persistent Savings (Home Energy Reports)	Residential & Low Income: Persistent Savings	Residential & Low Income: Persistent Savings	Residential & Low Income: Total Savings
		<i>Incremental GWh</i>	<i>Incremental GWh</i>	<i>Cumulative GWh</i>	<i>Cumulative GWh</i>
		(a)	(b)	(c)	(d)
(1) 2013	Actuals	10	59	334	344
(2) 2014	Actuals	36	63	397	433
(3) 2015	Actuals	31	79	476	507
(4) 2016	Actuals	29	91	567	596
(5) 2017	Actuals	30	86	653	683
(6) 2018	Actuals	24	78	731	754
(7) 2019	Actuals	25	75	805	830
(8) 2020	Actuals	26	54	859	886
(9) 2021	Forecasts	27	31	891	917
(10) 2022	Forecasts	27	20	911	938
(11) 2023	Forecasts	27	21	932	959

Table 2: Energy Efficiency Assumptions for the 2020 Electric Load Forecast

Calendar Year	State	Residential & Low Income: Total EE Savings	Residential & Low Income: Cumulative Savings
		<i>Incremental GWh</i>	<i>Cumulative GWh</i>
		(e)	(f)
2013	Actuals	69	344
2014	Actuals	100	443
2015	Actuals	110	553
2016	Actuals	120	673
2017	Actuals	117	790
2018	Actuals	101	891
2019	Actuals	99	990
2020	Forecast	73	1064
2021	Forecast	58	1122
2022	Forecast	43	1165
2023	Forecast	42	1207

PUC 2-6

Request:

Does the methodology change described in response to PUC 2-5 affect any of the Company's other forecasts (other than retail deliveries forecast)?

Response:

The same methodology described in response to PUC 2-5 was used to project the annual energy saving and peak load saving from energy efficiency programs. The annual energy saving went into the Company's Fall 2021 retail deliveries forecast and the peak load saving went into the Company's Fall 2021 peak load forecast.
