Information Request CLF-1-5

Request:

For each scenario modeled in the analysis reported in Exhibit NG-JNC-3, please provide a detailed accounting of how expected CO2 emissions compare to emission targets under the Regional Greenhouse Gas Initiative (RGGI) as follows:

- a. For each of the nine RGGI states and for the RGGI region as a whole present the forecast the RGGI regions' electric sector emissions from sources required to comply with RGGI for each scenario by year throughout the modeled period.
- b. Which scenarios do not achieve RGGI caps in each modeled year?
- c. Provide the RGGI electric-sector CO2 emissions caps assumed in years after 2020.

Supplemental Response:

- a. Please see Attachment CLF 1-5 (Highly Sensitive Confidential Information) for monthly electric price projections from non-New England RGGI states. The Company's original response provided monthly electric price projections only for New England RGGI states.

Original Response:

- a. For the RGGI region, Black & Veatch assumed a price projection for CO2 that would attempt to meet the caps prescribed by the RGGI program through 2020. Black & Veatch assumed that the RGGI program would be subsumed by a national program in the future. Emissions for the six state area of New England are provided as part of Exhibit NEER-1-1 and Attachment NEER-1-1(g).
- b. All cases considered for this analysis remain below the published caps from the RGGI program through 2020.
- c. Post 2020 no specific caps were assumed. Black & Veatch prescribed a price projection for CO2 to capture the uncertainty of CO2 policies beyond 2020.

Information Request CLF-1-6

Request:

For the analysis reported in Exhibit NG-JNC-3, please provide a more detailed accounting of compliance with state Renewable Portfolio Standards (RPS) in all modeled scenarios and years as follows:

- a. For each New England state, for what share of total state electric demand are REC purchases required in each year in each scenario and year modeled?
- b. For Massachusetts, by how much is the share of total state electric demand for which REC purchases required grow in ever year after 2020?
- c. For New York, are the NY-SUN and Large Scale Renewables programs modeled in addition to the state's existing RPS? If so, please describe how they are modeled in detail.

Supplemental Response:

Black & Veatch uses a proprietary model that develops the RPS forecasts for each Regional Transmission Organization ("RTO"). Below is a description of the process used for renewable build out.

To forecast additional renewable energy demand beyond the existing base of renewables, Black & Veatch employed the following steps in the process of deploying additional renewables for this analysis:

1. Estimate annual RPS requirements based on applicable load and annual targets;
2. Reduce a state's requirements by respective solar or distributed generation carve-outs or set-asides, and assumed wind and small hydro imports;
3. Estimate current level of RPS compliance;
4. Develop net cost supply curves, accounting for unique delivery requirements of each state; and
5. Apply incremental annual RPS requirements to net cost supply curves to determine lowest cost options.

Each state has different requirements with respect to delivery of the renewable energy to the state. Generally, states in an RTO only require renewable energy to be delivered to the RTO. Thus, renewable energy development would be in states with the best resources within the RTO. The remaining RPS states generally require energy to be delivered to the state to count towards its RPS.

Original Response:

- a. Black & Veatch models Renewable Portfolio Standards for New England at a regional versus a state level. Please see response to Information Request NEER 1-12 for a description of the modeling approach used by Black & Veatch.
- b. Beyond 2020, the share of total MA electric demand to be served by REC purchases grows by 1% each year.
- c. Black & Veatch's responses are limited to the New England area given the limited relevance of information regarding power markets outside of New England.

Responses to the Conservation Law Foundation's First Set of Information Requests

May 26, 2016

Exhibit CLF-1-9 (Supp.)

Page 1 of 1

Information Request CLF-1-9

Request:

For the analysis reported in Exhibit NG-JNC-3, please provide:

- a. In machine-readable, spreadsheet form provide the specific CO₂ allowance prices that are used in modeling for each scenario and modeled year.
- b. In machine-readable, spreadsheet form provide any annual probabilities used to weight these CO₂ allowance prices.
- c. Provide a detailed explanation of the rationale for and source of the probabilities used to weight these CO₂ allowance prices.
- d. Provide a detailed explanation of the rationale for and source of any CO₂ allowance prices used in this analysis.

Supplemental Response:

Please refer to Attachment CLF-1-9(a) (Highly Sensitive Confidential Information) for the RGGI CO₂ prices requested.

Original Response:

- a. RGGI CO₂ prices used in this analysis are provided in Attachment NEER-1-1(g).
- b. No probabilities were used for weighting the CO₂ prices.
- c. No probabilities were used for weighting the CO₂ prices.
- d. The analysis reported in Exhibit NG-JNC-3 used regional carbon prices, including RGGI CO₂ prices, throughout the country to achieve the CO₂ emission reduction targets for each region under EPA's Clean Power Plan by 2030.
